

Intent

Why do we teach this?

At Rollesby Primary School, we encourage children to be inquisitive throughout their time at school and beyond. The Science curriculum fosters a healthy curiosity in children about our universe and promotes respect for the living and non-living. We believe science encompasses the acquisition of knowledge, concepts, skills and positive attitudes. Throughout the programmes of study, the children will acquire and develop the key knowledge that has been identified within each unit and across each year group, as well as the application of scientific skills. We ensure that the Working Scientifically skills are built-on and developed throughout children's time at the school so that they can apply their knowledge of science when using equipment, conducting experiments, building arguments and explaining concepts confidently and continue to ask questions and be curious about their surroundings.

Implementation

What do we teach? What does this look like?

Our whole curriculum is shaped by our school vision, which aims to enable all children, regardless of background, ability, additional needs, and to flourish to become the very best version of themselves they can possibly be. We teach the National Curriculum, supported by clear skills and knowledge progression. This ensures that skills and knowledge are built on year-by-year and sequenced appropriately to maximise learning for all children. We use a range of resources to plan from including:

Teachers create a positive attitude to science learning within their classrooms and reinforce an expectation that all children are capable of achieving high standards in science. Our whole school approach to the teaching and learning of science involves the following;

- Learning is sequenced logically across a two-year cycle to ensure progression of scientific knowledge within each year.
- Through our planning, we involve problem solving opportunities that allow children to find out for themselves. Children are encouraged to ask their own questions and be given opportunities to use their scientific skills and research to discover the answers. This curiosity is celebrated within the classroom. Planning involves teachers creating engaging lessons, often involving high-quality resources to aid understanding of conceptual knowledge. Teachers use precise questioning in class to test conceptual knowledge and skills and assess children regularly to identify those children with gaps in learning, so that all children keep up.
- We build upon the learning and skill development of the previous years. As the children's knowledge and understanding increases, and they become more proficient in selecting, using scientific equipment, collating and interpreting results, they become increasingly confident in their growing ability to come to conclusions based on real evidence.
- Working Scientifically skills are embedded into lessons to ensure these skills are being developed throughout the children's school career and new
 vocabulary and challenging concepts are introduced through direct teaching. This is developed through the years, in-keeping with the topics.

Intent, Implementation & Impact – Science Created: 05/2023 Review: 05/2024

Intent - Science

- Teachers demonstrate how to use scientific equipment, and the various Working Scientifically skills in order to embed scientific understanding. Teachers find opportunities to develop children's understanding of their surroundings by accessing outdoor learning and workshops with experts.
- Children are offered a wide range of extra-curricular activities, visits, trips and visitors to complement and broaden the curriculum. These are purposeful
 and link with the knowledge being taught in class.
- Regular events, such as Science Week, allow all pupils to come off-timetable, to provide broader provision and the acquisition and application of knowledge and skills. These events often involve families and the wider community.

Impact

What will this look like?

The successful approach at Rollesby Primary School results in a fun, engaging, high-quality science education, that provides children with the foundations and knowledge for understanding the world. Our engagement with the local environment ensures that children learn through varied and first-hand experiences of the world around them. Frequent, continuous and progressive learning outside the classroom is embedded throughout the science curriculum. Through various workshops, trips and interactions with experts and local charities, children have the understanding that science has changed our lives and that it is vital to the world's future prosperity. Children learn the possibilities for careers in science, as a result of our expert films and curriculum links to industry, ensuring that children have access to positive role models within the field of science from a range of science disciplines and Stem related industries. From this exposure to a range of different scientists from various backgrounds, all children feel they are scientists and capable of achieving. At Rollesby Primary School, we aim to ensure every child enjoys science which results in motivated learners with sound scientific understanding.
